Abstract

Write about the proposed work touching the research gap you are addressing, the novelty, and the proposed deliverable aimed at this project. (Short description up to 250 words.)

1 Introduction

Detailed description (about nine pages, max up to 12 pages) in English, including the following information:

1. Introduction (max 1.5 pages):
    - Background and significance of the project (state of the art, justification for tackling a specific scientific problem, justification for the pioneering nature of the project, the impact of the project results on the development of the research field and scientific discipline);
    - Scientific goal of the project (description of the problem to be solved, research questions and hypotheses) and the project contributions;
    - Description of the rest of the report (what contains the following sections).
2. Related work
    - State-of-the-art in your particular domain, similar approaches, etc.;
    - Open and proprietary datasets the same or similar to your approach (also the datasets that you utilize in your work);
3. Approach & research methodology – underlying scientific methodology, methods, techniques and research tools, methods of results analysis, equipment and devices to be used in research;
4. Experiments and results – experimental procedures, more detailed exploratory data analysis on utilized datasets, results with ablation studies;
5. **Uncertainty of results** (new for 2026/27) – the main comparison from at least 3 runs with the spread reported (std/CI), or a stated reason why not. Conclusions must be consistent with the spread, not just the mean;
6. **Error analysis** (new for 2026/27) – at least 20 misclassified examples, grouped into named error types with counts and what each implies;
7. Discussion on your results – the relation to the state-of-the-art results with referring to literature and Tables and Figures with the results and summary plots;
8. **Limitations** (new for 2026/27) – what your result does NOT show, each limitation with its consequence for how the result may be read;
9. Conclusions and future work – summing up your report and contributions;
10. **Data statement** (new for 2026/27) – source of the data, licence, whether it contains personal data, and what you do about it;
11. Well-justified project literature – a reference list for publications included in the project description, with full bibliographic data. Arxiv preprints are not well-justified literature; you can use only those citations when they are fresh or not published;

12. Appendices with reproducibility tables or lists, ablations studies, other remarks, and analyses that are not crucial for the main text.
