Abstract

Write about the proposed work touching the research gap you are addressing, novelty, and on the proposed deliverable aimed from this project. (Short description up to 250 words.)

1 Introduction

Detailed description (**max. 4 meaningful pages**) in English, including the following information:

1. scientific goal of the project (description of the problem to be solved, research questions and hypotheses);
2. significance of the project (state of the art, justification for tackling a specific scientific problem, justification for the pioneering nature of the project, the impact of the project results on the development of the research field and scientific discipline);
3. concept and work plan (general work plan - with a timeline, specific research goals, results of preliminary research, risk analysis);
4. approach & research methodology (underlying scientific methodology, methods, techniques and research tools, methods of results analysis, equipment and devices to be used in research);
5. well-justified project literature (a reference list for publications included in the project description, with full bibliographic data);
6. **data statement** (new for 2026/27) – source of the data, licence, whether it contains personal data, and what you do about it. Six lines are enough;
7. **contribution table** – each team member, what they did, workload in hours. **Required in this and every later phase report; a report submitted without it is not accepted for grading, not just marked down**;
8. **declaration of LLM use** – which tools, for what. **A report without this is not accepted for grading** (new for 2026/27).

Reminder: place this and every later submission in a folder named `surname_surname_surname_surname` (all team members). The order set here must not change for the rest of the semester – a mismatch costs 5 points.
